Wheel clearance template:

Directions for use:

Print out this sheet, do not fit to page
Once printed measure length and height to ascertain if to correct scale.

If adjustment is required, use a photo copier to fine adjust to scale.

Once correctly scaled, glue to card backing and cut to profile outline.

This template can then be fitted into chosen wheel rim, aligning disc centre line to wheel centre.

Note: This is the swept profile of caliper and disc and makes no allowance for clearance between wheel and wheel spokes. Allow a minimum of 4mm around this profile.
